

Is Your Building Smart Enough to Save Lives?

The Youngest School Shooter in History

- Buell Elementary School's first grade class fell victim to the youngest school shooter in U.S. history.
- On February 29, 2000, 6-year-old Dedrick Owens shot and killed fellow classmate, Kayla Rolland with a handgun that was easily concealed in his trouser waistband. Her last words to her classmates after being shot were "I'm going to die?"
- Since that day, there have been 284 school shootings, to date with no end in site.

Time is Life

- School shootings have become a part of our reality, but it doesn't have to be that way.
- Our objective at LightAway is to protect and preserve.
- Join us and together we can light the path to safety.

The Alternatives Aren't Enough

- Equipment such as metal detectors are tools to prevent a shooting but have no function if a shooter slips past the system.
- Stationed police officers can act during an active shooter situation but are not posted continuously and may be a casualty and become a lost protective system.
- The patented LightAway system will provide the necessary information to direct the building occupants to safety. LightAway is dynamic and will respond if gunfire occurs in a different location.

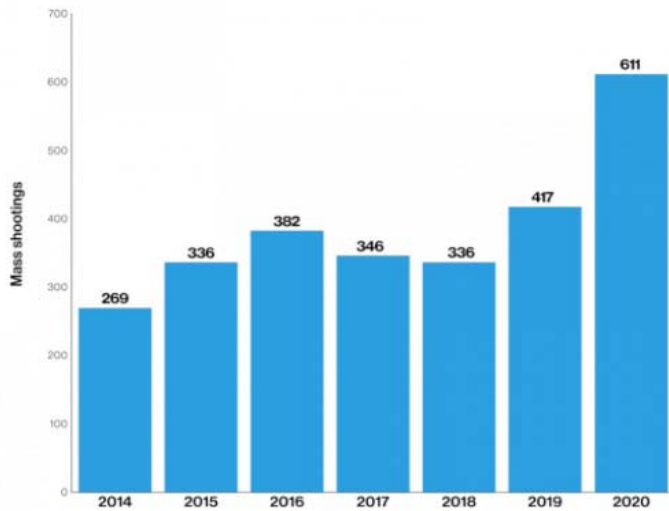

Is Your Building Smart Enough to Save Lives?

An Ever-Growing Issue

- For every minute (on average) that an active shooter incident takes place, one person dies, and two are injured.
- 45% of the shootings took place in businesses, 25% in schools, and 10% in Government facilities.

Mass Shootings Have Risen Since 2014

NEWS

LightAway Key Features

- Integrates with fire alarm systems, Guardian gunshot detection systems by Shooter Detection Systems, IP cameras, emergency panic buttons, door lock systems and many other smart building systems.
- Notifies individuals of the situation by directing them away from the active threat via color capable overhead lights effectively “lighting the way to safety”.
- Immediately calls and informs local law enforcement and building officials once gunfire has been detected.
- LightAway is a dynamic system that can respond to changes in gunshot location to always provide occupants with accurate information

With No End in Sight

- Center for Homeland Defense and Security (CHDS) data shows that school shootings are becoming more frequent, since the Columbine Shooting.
- 2015-2018 has a horrifically high frequency rate of school shooting cases with an average of 77 days in between each case compared to prior years

Active During a Time of Chaos

- Due to sensory overload and intense stress, the first message to guide the population to safety is crucial.
- LightAway’s patented system takes any confusion out of communication by clearly directing the building occupants to safety via color capable overhead lights.
- Repeat instructions along with audio and visual stimuli allow information to be accessible to all, even those that are blind or hard of hearing.

Contact Us: We build reliable high-performance systems to make buildings safe and efficient. We will schedule a visit if appropriate to discuss how we can help make your facility smart enough to save lives.
